

# Century 2000 Mk II Periscope

---

WWPC - CV35II

## Key Features

- Periscope accepts PL or PV mount lenses (16 & 35mm)
- Periscope is compatible with both PL and PV mount cameras
- A right angle elbow and straight tube are supplied (when using the straight tube the image will invert and revert requiring electronic correction in camera or later in post)
- The Periscope features an adjustable relay focus (this can improve minimum focus of user lens)
- The minimum stop of the Periscope is T4 (the iris on the Periscope already makes allowance for stop loss)
- Some wide angle lenses may vignette so a test should be carried out in some circumstances
- The Periscope is approximately 520mm long and 100mm in diameter (a test would need to be carried out if dimensions are critical)
